

Phase 1 - Immediate Objectives (Deadline: 2 weeks)

1- Store Publication (Android + iOS)

Prepare and publish a clean, stable first version on both stores.

2- Monero Integration (Backend)

Implement Monero for in-app purchases of the internal currency (Kauris).

The integration must be done properly from this first version.

3- New UI/UX Integration

I will provide the complete design files.

The current interface from the script needs to be fully replaced with the new design.

4- Mini-Games Integration

I will provide the source codes (GitHub + Construct 3 HTML5).

We need to integrate 3-4 mini-games in this first release.

Next Steps (after the first version is published)

Once the initial version is online, we will move to the next phase with:

Live Battle PK feature,

automated daily/weekly contests,

advanced statistics.

badges,

UI/UX enhancements,

social features,

and the rest of the modules planned for Ibeere 2025.

We will progress step by step, but efficiently.
